

SOP Sample for MSc in Australia Master in Public Health

STATEMENT OF PURPOSE

Name: {Name}
Qualification: Bachelors in Physiotherapy
Course Applied: Master in Public Health
University: Edith Cowin University

Self-Introduction & Family Background:

I want to share that my family is my source of inspiration, while providing me with great encouragement at any time of difficulty. I got married in {Year} and since I am living in a family of four my husband, brother-in law and co-sister. My husband is a {Position} in Toyota Kirlosker Motors Pvt. Ltd while the other members also work and earn well.

Education background:

Academic interest takes time to begin and develop, and my understanding of public health has grown as a result of a variety of academic and professional activities. I've worked into the wee hours of the morning to achieve achievement at every milestone I've reached. As a result, after graduating from Mother Theresa High School in {Year} with an aggregate of {Marks} percent, I decided to pursue science topics for my post-secondary study. In {Year}, I completed my senior secondary from Mount Carmel pre-university college with subjects of Physics, Chemistry, Biology, and Mathematics. As a naturally curious and inquisitive individual, I have always desired information and education. Since beginning, I have been a talented individual interested in a variety of subjects but as I progressed through high school, I discovered my true passion was in the field of health care. I realised I had a strong desire to devote my life to helping others. I received my bachelor's degree in Physiotherapy, which was the first step toward achieving this goal. In the year {Year}, I completed my undergraduation at Rajiv Gandhi University of Health Science. Learning subjects such as biochemistry, biomechanics, psychology, sociology, general surgery, cardiology, physiotherapy, and others piqued my interest in the field of health science and allowed me to explore the possibility of a successful career in this field, resulting in a desire to learn more about it with transitory time. I gained experience in practically using this gained intellect by engaging in various research and projects. Out of which my research project included "the effect of physical activity on primary dysmenorrhoea: a literature Review" and various other projects as I participated in Interdisciplinary community outreach program (IDCOP), Pulse polio Immunization program {Year}, School Health Program organized by M.S Ramaiah physiotherapy department and geriatric health program as a part of community mobilization program.

Further garnishing my medical knowledge with respect to industrial requirement, I completed internships in at a wide spectrum of areas which includes Covid ICU, Orthopedic wards and outpatient departments, surgery wards, OBG ward, Paediatric outpatient departments, paediatric ICU and neonatal ICU. Also I had done Neuro rehabilitation training and Neuro wards at M.S. Ramaiah Memorial Hospital and Geriatrics and oncology wards and OPD.

Though I have been dedicated to my academic career, I have never limited my development to it. I understand how crucial it is to be active in both scholastic and extracurricular activities for the diverse development of one's personality. Being extremely dynamic in sports, I have played several inter-state and inter district level competition for Hammer Throw. While also play various other sports such as Throwball, Basketball, Kho-Kho, Running, Shortput and Badminton.

Why not India?

I was fully aware of the present situation of Indian education because I received my bachelor's degree in India. I became privy of the system's problems but was powerless to address them, so I chose to further my career by relocating overseas. The Indian education system has a flaw in that the colleges do not provide students with the most up-to-date technology, software, equipment, and instruments. Indians are doomed to rely only on books, leaving them with little creativity and little practical knowledge or skill. Without a doubt, focusing solely on the theoretical component motivates them to work hard, but it also limits their opportunities for personal growth. As a result, I've chosen to study in a different country in order to broaden my social horizons and gain expertise in public health strategies.

Why not other Countries?

From all of the foreign nations, studying in Australia is the most favourable option. Students in countries like the United States, the United Kingdom, and New Zealand provides a high-quality education. Even yet, the cost of living and education in these high-cost countries is out of reach for the average people. The language barrier becomes obvious when we examine countries like China, Japan, and Germany, where education expenses are very low or free. It would take a large amount of effort to first learn and understand their language before diving into topic knowledge. When it comes to another well-known nation, Canada, I believe its severe environment makes it tough to survive in extremely cold temperatures. As a result, I believe that, in terms of climate, language, cost of living, and educational quality, Australia is the finest place to study in.

About Public Health

Healthcare is the only industry that grows in tandem with the population, and as a result, so does the need for health professionals. Working as an Intern at Covid-19 ICU times let me recognise the serious issues that the healthcare industry faces across the world. I was really moved by several desperate moments during the pandemic, when individuals were unable to receive care owing to a lack of resources. As a result, I concluded that my nation desperately needs professional healthcare practitioners who can plan, implement, and grow public health policies that are adapted to specific scenarios and circumstances. As a result, I've decided to enter the field of healthcare with the goal of assisting others and making a difference in their lives. Now further I plan to study Master's in public health overseas, as I have recognized the magnitude of efficient management in maximizing the services we offer and ensuring the persistent success of healthcare stations. Earning this degree will be the ultimate achievement that will enable me to become a crusader in India's crumbling healthcare system. The course would be a fantastic fit for me because I have the qualifications and background in doctorate studies to reach the top of the public health leadership field.

Why Edwin Cowin University?

During my research, I learned that multiple previous and present students have repeatedly praised EDU for its pragmatic and industry-aligned teaching style. I also realised that the institution had developed an outstanding programme that directly addressed the problems in the healthcare industry as a whole. This persuaded me that the institution could meet the vast majority of my objectives without putting me under undue financial burden. Furthermore, after discovering that the University has excellent professors and complementing pedagogical infrastructure to support students' overall academic development, I decided to make a firm decision of choosing this University.

Why Australia?

When most people think of Australia, they think of big open spaces, kangaroos, koalas, and pure air and water. Australia, on the other hand, has a lot more to offer than that. Because of its pleasant, laid-back demeanour, good school system, and high standard of life, I opted to study in Australia. For overseas students, Australia is now the third most popular location. Its cultural richness, pleasant locals, and excellent educational standards. Australian degrees are recognised by colleges and companies all around the world. Because of the remarkable international reputation of the Australian education system, graduates from Australian institutions are in great demand. The Australian government rigorously regulates this system in order to maintain a high level of education. Moreover it offers students aiding programs like TEAN, TPS (tuition protection service), WEP (World Education Program) and more to comfort and help them adjust to their new surroundings.

Conclusion

Talking about my future aspects, I aim to manage my academic record, research experience, and genuine passion for this specialty to solve problems of my country's deteriorating health conditions. As on shorter terms, I aim to complete the course with full perseverance and study in-depth knowledge of public health. Soon after completing the course, I would return to India to aware the humans of India about their health problems and solutions. Hence in the long haul, I wish to see myself as a dedicated individual working in the health sector serving society with responsibility and dedication.
